

Day	Poster Number	Name	Surname	Abstract title
		Vincenzo	Andretta	High cadence Metis observations
		Frédéric	Auchère	Pre-flight calibration of the full sun channel of the Extreme Ultraviolet Imager on board Solar Orbiter
		Frédéric	Auchère	Solar Orbiter/EUI/FSI very wide field observations of the EUV corona
		Kamlesh	Bora	Numerical simulation of jets emerging from coronal hole plumes (POSTER)
		Éric	Buchlin	Solar Orbiter/SPICE data products and analysis tools
		Srijan Bharati	Das	How do inferred statistical properties of switchbacks depend on their definition?
		Francesco	Frascella	Streamer belt variability over Solar Cycle 25: solar wind and magnetic field topology in the middle corona assessed by the Metis coronagraph
		Zesen	Huang	Solar Wind Turbulence, Leakage from Photosphere 5-min Oscillations?
		Khagendra	Katuwal	Magnetic configuration during the formation, evolution, and expansion of equatorial coronal holes
		Khagendra	katuwal	Study of unipolar magnetic field configuration of the equatorial coronal holes.
		Emil	Kraaikamp	EUI HRI-EUV in-flight calibration challenges
		Federico	Landini	In flight stray light evaluation for the Solar Orbiter/Metis coronagraph
		Jeongwoo	Lee	Solar Spicules and Solar Wind Switchbacks
		Philipp	Loeschl	First application of a combined synoptic magnetic field map using SDO/HMI and SO/PHI data
		Susanna	Parenti	Characterizing the streamer belt with Metis and EUI instruments on Solar Orbiter.
		Abbas	Raboonik	Exact Nonlinear Decomposition of Ideal-MHD Waves Using Eigenenergies
		Evgeny	Romashets	Toroidal and Spherical Interplanetary Magnetic Clouds.
		Fouad	Sahraoui	Non-universality of the Turbulent Spectra at Sub-ion Scales in the Solar Wind: Dispersive Effects versus the Doppler Shift
		Rahul	Sharma	Exploring the relation between transverse energy injection scales and plasma properties in the corona
		Samuel	Skirvin	'Modelling the connection between propagating disturbances and solar spicules'
		Marek	Vandas	Flux Calibration of Solar Magnetic Field.
		Tania	Varesano	Time Dependence of FIP bias observed in SPICE SPROUTS Observations
		Minami	Yoshida	Characteristics of sunspots increasing the open magnetic flux
		V	Aparna	Investigation of Sunspot Penumbral-Jets using DKIST Data
		Luis	Bellot Rubio	Long-duration measurements of the solar atmosphere with Solar Orbiter PHI-HRT in coordination with other instruments
		David	Berghmans	EUI high resolution observations of decayless oscillations
		Thomas	Berkefeld	Instrumental Developments at the 1.5m GREGOR solar telescope, Tenerife
		Matthieu	Berthomier	Towards the systematic correction of Solar Orbiter electron data using SPIS
		Aditi	Bhatnagar	Investigation of spatial and temporal coherence of Quiet-Sun Ellerman bombs and transition region brightening events using magnetic field extrapolations.
		Nicolas	Bian	TBD
		Daniele	Calchetti	Overview of the Solar Orbiter Atmospheric Dynamics Structure SOOP on 20 October 2023
		Lapo	Casetti	HEATING WITHOUT HEAT: TEMPERATURE INVERSION IN THE SOLAR CORONA FROM CHROMOSPHERIC TEMPERATURE FLUCTUATIONS
